To whom it may concern,

I am very relieved and excited to hear that the government is moving towards more sustainable transportation in our country, especially given the current statistics pointing that we only have twelve years left to implement all the changes needed to reverse climate change.

I would like to add my voice and that of my family in a vote towards sustainable energy in all sectors and support our government in facilitating sustainability.

Please continue to choose the health and safety of the planet over short term gains, if the planet changes drastically, we change drastically. There's no second chance or option for hindsight.

Kind regards,

Gabby.
